7NFB deposited asymmetric-unit context — reference 7NFB|B|1

Blue: reference 7NFB|B|1
Grey: other polymers; orange: short peptides
Green carbons: GEN across the ASU
Canonical ESR1 differences: 28; 28 annotated engineered mutations.

Reference 7NFB|B|1: author chain B, label chain B, model 1. Selected receptor blue; other polymers grey; short peptides orange; organic molecules sticks. Deposited title: ER-PRS*(+) (Y537S) in complex with genistein and SRC-2 coactivator peptide Canonical ESR1 differences: 28; 28 annotated engineered mutations. Saved contact assignments: 7NFB|B|1: GEN (pocket_compatible). Green carbon sticks: GEN throughout the ASU, including other receptor copies; other organic carbons grey. Deposited asymmetric unit; waters and ions hidden. Contacts alone do not establish binding mechanism.
